

Quarterly Financial Review

Q2 2026 -- Served Marketing

Window: 2026-04-01 to 2026-06-30 · Generated 2026-09-23 · Calendar quarters

Every figure in this document is drawn verbatim from the same deterministic engines that power the live dashboard -- a number here equals the dashboard number for the same window. Comparisons are shown only where like-basis history exists; gaps are stated, never estimated. The 3x section is a model of what must be true, not a forecast.

1. Executive summary

CONTRACTED \$253,200 16 closes	NEW-DEAL CASH \$98,255 cash-truth	LTGP:CAC Nonex CAC \$2,771
XERO REVENUE n/a P&L recognized	XERO NET PROFIT n/a	ACTIVE CLIENTS 45 current roster

Q2 2026 closed 16 deals for \$253,200 contracted and \$98,255 new-deal cash.

To 3x overall growth next quarter, the binding constraint is Delivery hires (OUT-OF-TREND). The fundable levers (leads, ad spend) hold because unit economics stay above the floor at scale; the wall is operational. Full model in section 4, and the scaling plan in the Marketing Roadmap.

2. The quarter -- Q2 2026

Revenue & cash

Metric	Value	Basis
Contracted revenue	\$253,200	closes x contract value (tracker)
New-deal cash collected	\$98,255	Stripe cash matched to closes
Avg contract value	\$15,825	per close
Xero revenue	n/a	P&L recognized (not cash)
Xero gross profit	n/a	--
Xero operating expenses	n/a	P&L
Xero net profit	n/a	P&L

Stripe cash and Xero revenue are the same money seen two ways (cash vs P&L-recognized) and are never summed -- they are shown separately and labelled.

Unit economics (window-consistent)

Metric	Value	Detail
Closes	16	by Close Date
Loaded CAC	\$2,771	ad \$24,383 + closer \$17,600 + setter \$2,355
LTGP:CAC	Nonex	floor 3.0x
ROAS	10.38x	contracted / ad spend
Ad spend	\$24,383	meta_daily_store

MRR bridge

Leg	Value	Basis
Closing MRR	\$72,888	live roster current MRR
New MRR added	\$22,335	9/16 closes matched

New MRR is the sum of roster MRR for in-window closes matched by name (9/16 closes matched). Opening MRR is not snapshotted historically, so the full opening->closing bridge is shown where the quarter is recent; older quarters show the derivable legs only.

Monthly velocity -- leads

Apr 2026	103
May 2026	109
Jun 2026	88

Monthly velocity -- closes

Apr 2026	4
May 2026	4
Jun 2026	8

[!] Leading-indicator warning: Jun 2026 leads 88 (-19% MoM vs May 2026's 109) -- closes trail leads by 1-2 months, so this foreshadows next-quarter close risk. Refill the top of funnel now.

Where the profit went -- operating-expense bridge (QoQ)

Per-line Xero opex unavailable (Xero P&L unavailable for this window); current monthly burn decomposition (run-rate, not a quarter total):

Burn line (monthly run-rate)	Amount
------------------------------	--------

Burn line (monthly run-rate)	Amount
Team payroll	\$21,670
Owner pay	\$6,800
Ad spend	\$0
Subscriptions	\$3,867
Other opex	\$817

3. How it compares

QoQ: Q2 2026 vs Q1 2026

QoQ	Current	Prior	Delta
Contracted revenue	\$253,200	\$223,800	+\$29,400 (+13%)
New-deal cash collected	\$98,255	\$54,645	+\$43,610 (+80%)
Avg contract value	\$15,825	\$15,986	-\$161 (-1%)
Closes	16	14	+2 (+14%)
Loaded CAC	\$2,771	\$1,124	+\$1,647 (+146%)
LTGP:CAC	n/a	n/a	not computable
ROAS	10.38x	274.27x	-263.89x (-96%)
Ad spend	\$24,383	\$816	+\$23,567 (+2888%)
Leads (cohort)	300	287	+13 (+4%)
Lead->close %	6.3%	5.2%	+1.1% (+21%)
Xero revenue (P&L)	n/a	n/a	not computable
Xero net profit	n/a	n/a	not computable

9/12 fields were like-basis comparable. Fields showing unavailable had no comparable prior-period data (stated, never fabricated).

YoY: Q2 2026 vs Q2 2025

YoY	Current	Prior	Delta
Contracted revenue	n/a	n/a	not computable
New-deal cash collected	n/a	n/a	not computable
Avg contract value	n/a	n/a	not computable
Closes	n/a	n/a	not computable
Loaded CAC	n/a	n/a	not computable
LTGP:CAC	n/a	n/a	not computable
ROAS	n/a	n/a	not computable
Ad spend	\$24,383	\$0	+\$24,383
Leads (cohort)	n/a	n/a	not computable
Lead->close %	n/a	n/a	not computable
Xero revenue (P&L)	n/a	n/a	not computable
Xero net profit	n/a	n/a	not computable

1/12 fields were like-basis comparable. The prior period's tracker was nascent (too few closes to be a real basis), so sales/unit-economics YoY is NOT computable -- only the deep-history sources (Xero revenue/profit, Meta ad spend) are compared. Fields showing unavailable had no comparable prior-period data (stated, never fabricated).

4. What would need to be true to 3x -- Q2 2026 - next quarter

A model of what must be TRUE to 3x overall growth -- not a forecast. Every figure is the quarter's own actual scaled by the multiple; assumptions are stated and adjustable. Ask EDITH 'what if close rate hits 55%?' to recompute.

The targets (3x this quarter's actuals)

Target metric	This quarter	3x target
Contracted revenue	\$253,200	\$759,600
New-deal cash collected	\$98,255	\$294,765
Closes	16	48

Funnel math -- two paths to the required closes

Volume path: Same 6.3% lead->close, 3x the lead flow. Needs ~900 leads, 237 sets, 165 shows [OUT-OF-TREND].

Efficiency path: Same 300 leads, close rate 6.3% -> 16.0%. [OUT-OF-TREND]

Spend math

At the current cost-per-lead of \$81, the volume path needs about \$73,149 in ad spend (vs \$24,383 this quarter). CAC is held constant at \$2,771 -- CAC drift at scale is unknowable, so it is an explicit assumption, not a claim. LTGP:CAC is Nonex and falls below the 3.0x floor at that scale.

Capacity math

3x clients means 45 -> 135 active. At ~12 clients per delivery hire, that's about 8 hires (~4wk lead time each) [OUT-OF-TREND]. At 3x MRR the payroll:MRR gate (<=40%) survives IF new payroll scales slower than MRR -- plausible since MRR triples but hires are stepwise. Exact impact needs per-hire cost; flagged as a modelled assumption.

Benchmark provenance: clients-per-hire (12) and hire lead time (4wk) set by Rydel 2026-07-27; payroll:MRR gate 40% and LTGP:CAC floor 3.0x are Served standing thresholds.

Churn math

Not computable -- churn MRR isn't measured for this window yet. MRR snapshotting + churn derivation (from the write-back audit) begin now, so this becomes computable from the next full quarter.

Requirements -- required vs current, flagged

Lever	Current	Required	Flag
Lead volume (volume path)	300	900	OUT-OF-TREND
Close rate (efficiency ALT)	6.3	16.0	OUT-OF-TREND
Ad spend	\$24,383	\$73,149	OUT-OF-TREND
Delivery hires	0	8	OUT-OF-TREND

The binding constraint

The binding constraint is Delivery hires -- operational (can't be solved with capital alone). It is the hardest requirement to clear, so it caps the 3x before the others do. Fundable levers (leads, spend) hold because unit economics stay above the floor at scale; the wall is here. Fix or fund this first, or the rest of the plan can't land.

5. Marketing roadmap -- the scaling plan

A scaling roadmap -- the ramp, the spend, the drift band, and the sequence. Assumptions are stated and adjustable; where a feed is thin it's labelled.

Channel decomposition (current lead mix)

Source	Open leads	Share
--------	------------	-------

GHL lead-source, ~98% populated; Meta is the dominant paid channel.

The lead ramp -- 300 this quarter -> 900 next (3x), graduated monthly (not flat)

Month	Leads target	Ad spend at current CPL
Oct 2026	252	\$20,483
Nov 2026	306	\$24,872
Dec 2026	342	\$27,798

CPL-drift band -- CPL is NOT held flat silently; the consequence of drift at 3x spend

CPL drift	CPL	Qtr ad spend	CAC@scale	LTGP:CAC	Above floor?
+0%	\$81	\$73,152	\$2,771	n/a	NO
+15%	\$93	\$84,125	\$3,187	n/a	NO
+30%	\$106	\$95,098	\$3,602	n/a	NO

Creative cadence implication

Scaling ad spend to ~\$73,149 means roughly 2-3x the creative test volume -- plan the batch cadence up front. (Batch-economics feed not wired; stated as an assumption to confirm.)

Weekly checkpoints during the ramp

Watch weekly	On-track threshold	Why
CPL	<= \$93	the drift band's inner bound
Lead volume vs ramp line	>= that week's ramp target	the leading indicator
Lead->set %	>= 26.3%	setter throughput holds
Set->show %	>= 69.6%	show discipline holds
LTGP:CAC to-date	>= 3.0x	unit economics stay fundable
Payroll:MRR	<= 40%	the delivery-cost gate

Sequenced Q3 actions (owners for you to assign)

When	Action
Week 1	Start 8 delivery hire(s) -- 4wk to productive, stepwise as clients land; capacity is the binding constraint.
Week 1-2	Lift Meta spend toward Oct 2026's \$20,483 and instrument the ramp line for weekly tracking.
Week 1	Instrument churn now (MRR snapshots + write-back audit) so the net-growth math becomes computable next quarter.
Weeks 2-6	Scale creative test cadence to match the spend ramp; watch CPL against the drift band's +15% inner bound.
Nov 2026	Hit 306 leads / \$24,872 spend; re-check LTGP:CAC stays above the floor before stepping to month 3.
